PetaByteMind — Brand Guidelines

Thought Architecture · Data Clarity · Software Systems

1. Brand Essence

PetaByteMind is not a personal brand. It is not motivational, emotional, or expressive. It behaves like a system interface. The core metaphor is the human mind as a high-performance server operating in dark mode.

2. Visual Philosophy — Void & Structure

Void represents silence, space, darkness, and restraint. Structure represents grids, logic, alignment, and precision. Every visual element must justify its existence by communicating information.

3. Color System — Cold Storage

Void Charcoal (#0B0E11) is the main background color. Graphite UI (#1F2428) is used for containers. Steel Text (#B0B8C6) is used for body text. Hyper Cyan (#34D3D5) is used sparingly for highlights. Logic Blue (#2B6CB0) is used for secondary references.

4. Typography System

IBM Plex Sans is used for headings and body text. JetBrains Mono is reserved for code blocks, system messages, and technical labels. Typography must feel engineered, not decorative.

5. Layout & Grid Rules

Layouts follow strict alignment and invisible grids. Use generous margins and spacing. Empty space is intentional and functional.

6. Text & Copy Style

Tone is cold, precise, neutral, and professional. Avoid hype, poetry, emojis, and motivational language. Use declarative, system-like sentences.

7. Content Types

Allowed content includes concept deconstruction, engineering philosophy, mental models, and system analogies. Trends and emotional content are excluded.

8. Iconography & Graphics

Icons must be minimal, technical, and geometric. Avoid illustrations, organic shapes, and playful elements.

9. Imagery Rules

Images are rare. When used, they should represent server rooms, abstract data, or dark interfaces. Faces and lifestyle imagery are forbidden.

10. Final Law

If a design feels like a person trying to be deep rather than a system operating clearly, it must be removed.
